

Dalkia acquires Edison Next's activities in Poland, thereby strengthening the EDF group's presence in the country's energy transition markets

Dalkia Polska, a subsidiary of Dalkia and part of the EDF Group (Electricité de France), has completed the acquisition of 100% of the shares in two companies: Edison Next Poland and Edison Next Services Poland. This acquisition, representing a turnover of nearly €100 million, reinforces Dalkia's position in Poland, confirming the country as its second-largest strategic market outside of France.

This intra-group transaction is part of the EDF Group's strategy to consolidate its energy services in Poland under the sole Dalkia brand. Dalkia Polska has been present on the Polish market since 2014. It operates in the field of heat production and distribution in the Silesian-Dąbrowa agglomeration and supports the energy transition in the industrial and district heating sectors.

The acquired companies offer comprehensive energy services for industry. Their specialities include: maintenance and management of energy infrastructure, implementation and financing of energy efficiency improvement projects and the deployment of green technologies (including renewable energy and decarbonisation solutions). The Edison Next Poland companies operate in Tychy, Bielsko-Biała, Rzeszów, Krosno and Zawiercie.

"Thanks to this transaction, Dalkia consolidates its position on the Polish market, where we remain committed to our long-term development plans", said Jacek Chodkowski, General Director of Dalkia Polska. *"We are pleased to welcome our new colleagues. We are convinced that by combining our expertise and experience, we will be able to implement projects with even greater impact and efficiency",* he added.

The integration of these companies significantly strengthens Dalkia Polska's position in the key industrial services sector. As Sylvie Jéhanno, President and CEO of the Dalkia Group, explained: *"We are delighted that the Edison Next Poland companies are joining Dalkia Polska. This is a strategic decision that furthers our development goals in Poland. Most importantly, by joining forces, we will be able to more actively support the ambitious energy transition programme for the Polish economy".*

"Our priority is to provide the highest quality services to our customers. This transaction proves that by pooling our competences, we are creating one strong team that will offer customers access to a broader portfolio of services throughout Poland", stressed Yannick Duport, International Director of the Dalkia Group.
